TipKno

TipKno:  
This will be an tip management application that will store the users tips from their job including, hours worked, day of the week, and month the tips were made. Then the user can see information about the tips like average per hour, tips made that week/month, as well as what day of the week made the most/least money. The user will log in with Facebook API in order to use the site.

Language/framework: PHP / CodeIgniter

Features:  
v1- (1)setup html forms/tables etc. (2)CRUD  
v2/v3- (3)Setup FB API login (4)form/input validation (5) create functions to display averages/ highs/ lows/tips per hour (6) styled and tested

Progress Schedule:  
week 2- v1 complete first 2 features when I have time off work.  
week 3 - work on next two features when not at work.  
week 4- complete last two features including testing, styling and final tweaks.
